Full list of author information is available at the end of the article

Dear Sir

I am writing in context of the first issue of Medical Science published recently. First I would like to congratulate the editor in Chief in particular for taking this initiative to start this esteemed journal. Medical Science is a peer reviewed multidisciplinary journal which publishes articles from various fields like medical, dental, nursing and allied health.

I read with great interest the first issue of Medical Science which consists of five articles

1. The Editorial- Preface to first edition [1]
2. Impact of Gender, Nationality and Drawbacks in Medical Profession as a Predictor of Future Career Specialization among Medical Students
3. Use of computer among medical students: A cross sectional study
4. Application of Binary Regression analysis in the prescription pattern of Antidepressants
5. Teaching Communication Skills: A five year experience from a private medical school of Nepal

The First edition was primarily focused on medical education. Article by Kumar S has showed that the use of computer is very important in life. It has exhibited that the use of computers are increasing in medical education technology. All the medical

students should learn use computers as most of the laboratory investigations, X rays, open heart surgeries, C arm in Orthopaedic Surgeries are done with the help of computers. Even computer is needful for presenting any paper in the conferences by using power point presentations. So a medical student should learn computer because it will be useful for them in future [2].

Article by Roy B et.al on drawbacks in medical profession is written with lot of effort. The article has showed that how proper steps can be taken to choose the future career of a medical student and what are the drawbacks of different specialties of medical profession [3].

Teaching communication skills article is from a different field. It an article from Pharmacology. The article has demonstrated that Communication with the patients always remains a problem for the doctors. Communication Skills is a part of the undergraduate medical course followed in Manipal College of Medical Science by the pharmacology department. In Communication Skills a medical student is taught how to communicate with the student from the very beginning of their medical course [4].

The article on the application of logistic regression model has also exhibited that how the standards and quality of the article can be increased by using Odds Ratio. The author has also rightly pointed that in Nepal most of the studies are reported by using percentages and the quality of article can be increased by using proper statistical techniques [5].

All the articles are written well maintaining good standard and quality. The First edition of a journal is always an asset. I wish all the best for the Medical Science in future.
